Objective

Highly motivated Computer Engineering student with a strong foundation in system architecture and analytical problem-solving. Eager to secure a challenging role where I can contribute to innovative tech solutions, bridge the gap between theory and practical application, and continuously grow my engineering expertise.

Professional Experience

As a motivated entry-level professional, I bring a strong appetite for hard work and a focus on growth. I am highly adaptable with experience building functional projects like system telemetry tools and data dashboards. I am eager to rapidly absorb your tech stack and contribute to the team's success.

Projects

CanteenOS 04/2026 – Present

Queue Optimization & Waste Reduction System

- Developing a streamlined digital receipt and token platform to optimize queue handling and significantly reduce customer wait times during peak hours.
- Implementing consumption tracking and financial monitoring metrics to actively minimize daily food waste and improve overall operational efficiency.
- Building the core transaction logic from the ground up to ensure real-time receipt generation and seamless, high-volume system performance.

Edu-Trace 03/2026 – 04/2026

Student Telemetry System

- Developing an end-to-end telemetry system using **Python** and **SQLite** to monitor and analyze student coursework activity on Windows systems.
- Implementing **background agents** to track application usage and window focus, providing deep insights into productivity and practice hours.
- Built the system from the ground up to handle data persistence and real-time activity logging.

Education

Data Science 02/2026 – Present

Tops Technologies Ahmedabad, India

- Approached every subject with full dedication, building a solid foundation in Python, specialized libraries, and database management. Successfully translated complex statistical math and matrix theory into practical code to develop creative, data-driven projects.

- Continuing my journey through this course with so much more to uncover, especially as I move into the deeper AI and ML modules to see what else I can create.

Bachelor of Engineering | Computer Engineering

Monark University | CGPA: 9.18 / 10.0

10/2024 – Present

Ahmedabad, India

- Got hands-on experience with microcontrollers, circuit design, and programming languages like C and Python through projects and labs that made theory come alive.
- Fully leaned into the Computer Engineering curriculum, making sure I actually mastered the core concepts so that I could use them to build cool stuff. I am always experimenting with new tools and frameworks to turn theory into working tech.

Diploma in Engineering | Computer Engineering

Gujarat Technological University | CGPA: 8.35/10.0

10/2021 – 07/2024

Ahmedabad, India

- Developed a deep understanding of software development and system architecture through consistent academic excellence and the practical application of core engineering fundamentals.

Skills

Programming Languages

Python, C, C++, Java

Data Science

Pandas, NumPy, Matplotlib, Seaborn

Math

Statistics, Matrix Mathematics

Database

SQL, MongoDB

Frontend Basics

HTML, CSS, JavaScript

Strength

Intellectual Curiosity

A natural drive to research new technologies and deep-dive into documentation to understand how systems work from the ground up.

Critical Thinking

A logical approach to solving complex problems, from troubleshooting intricate code errors to translating mathematical theory into functional software.
